@DeborahKurata

pluralsight 
hardcore dev and IT training

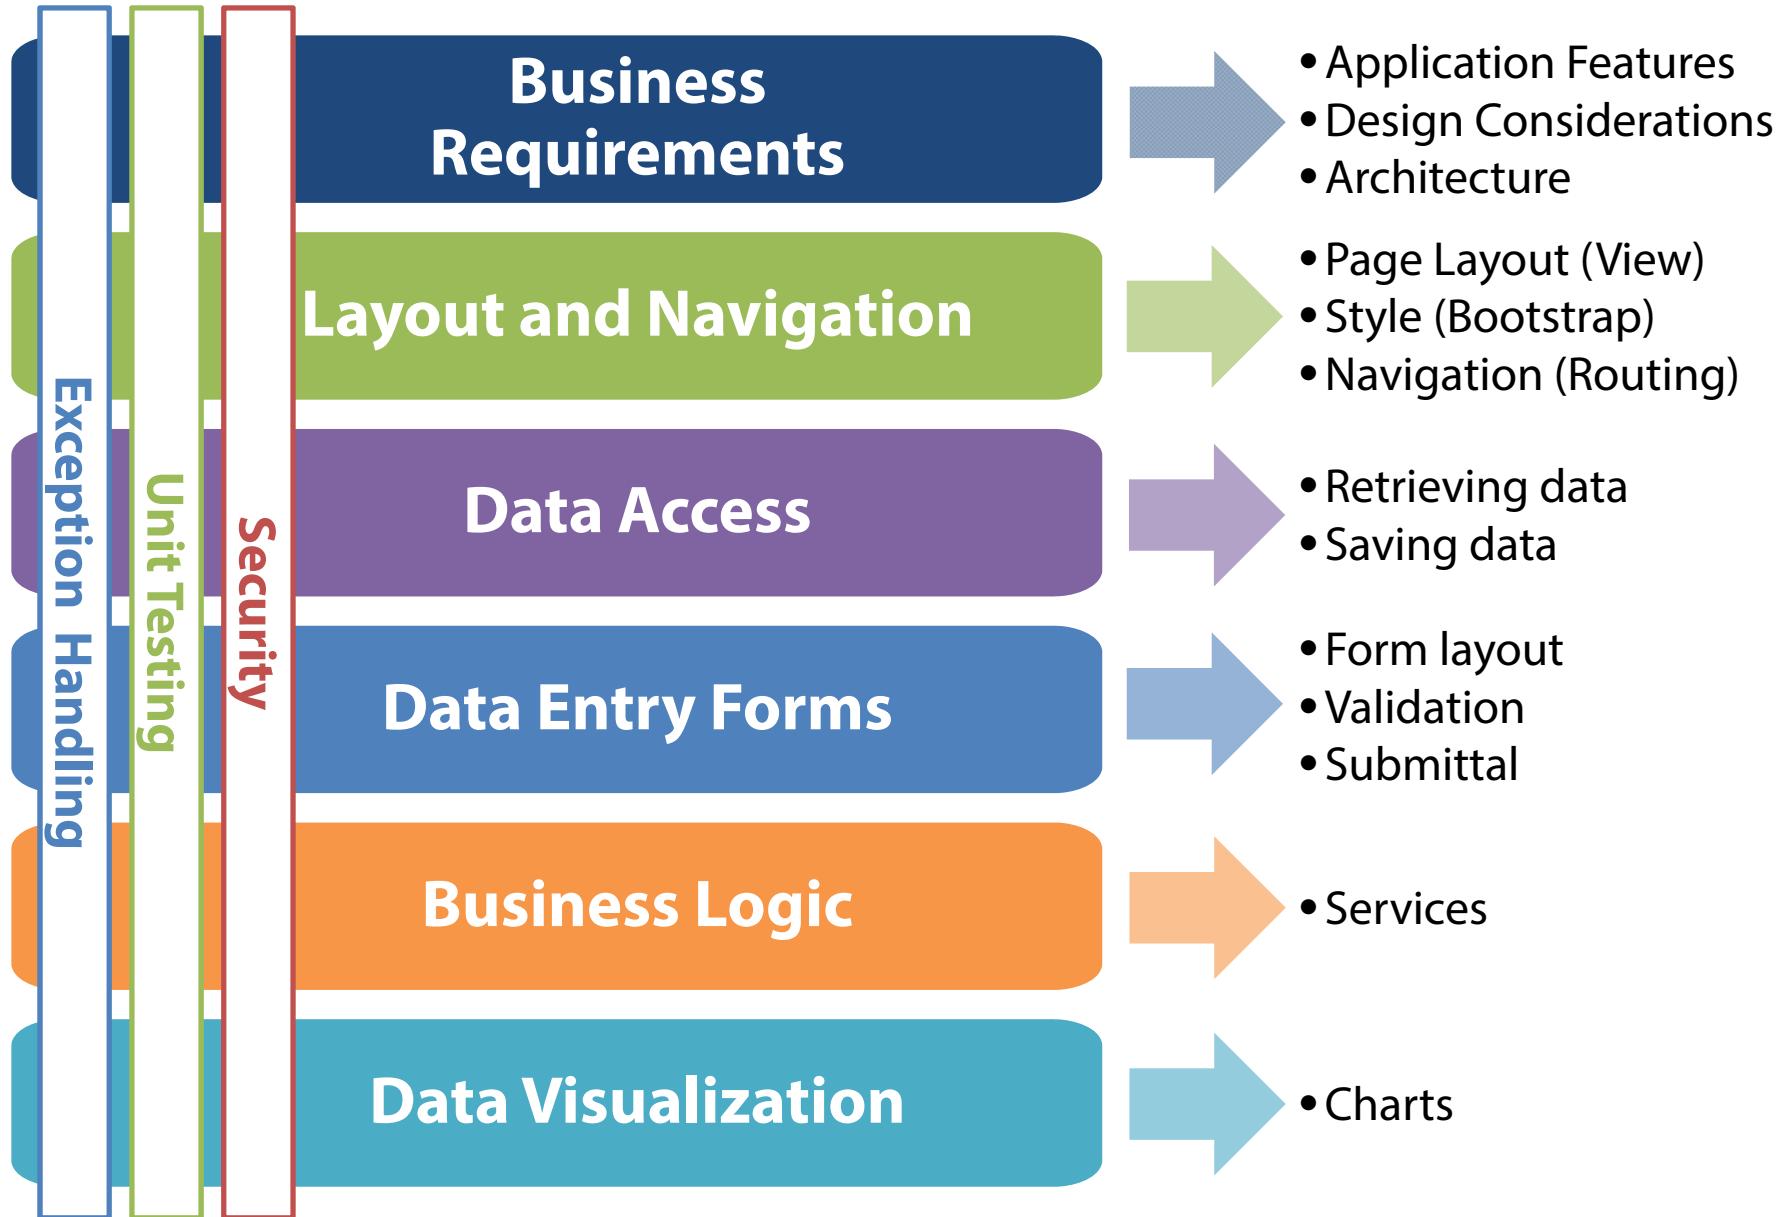

Module Objectives

Review the tasks for building a line of business application

Provide an overview of Unit Testing

Discuss Security consideration

Angular Line of Business Applications

Unit Testing is

Isolating a piece
of code

Validating its
functionality

Testing it independent
from the rest of the
application

Unit Testing can

Promote **clean** and
encapsulated code

Reduce bugs

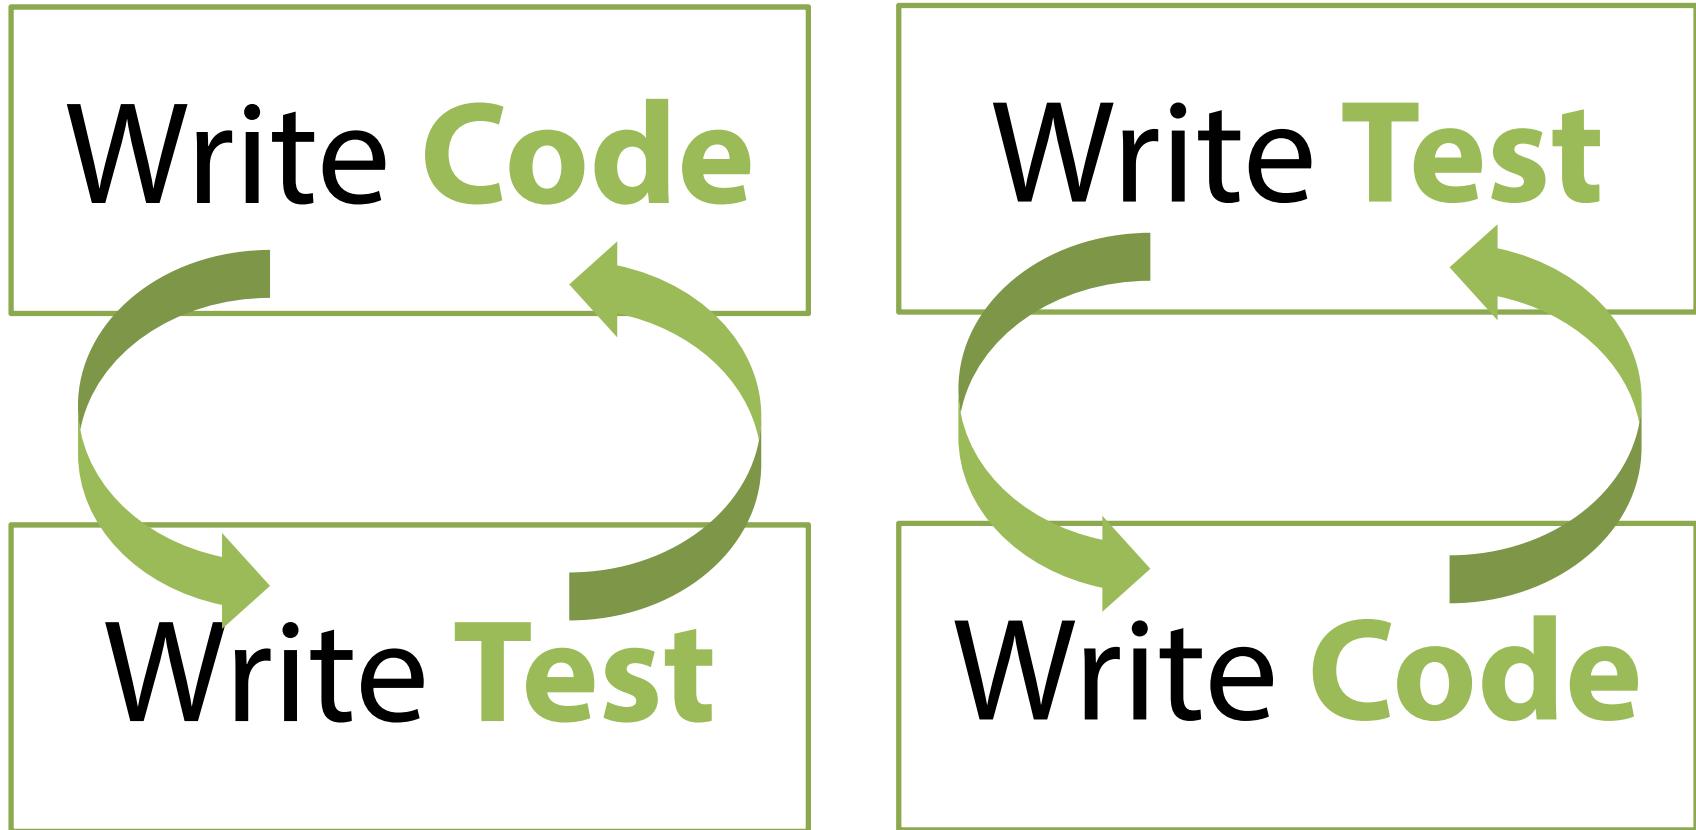

Minimize
debugging time

Unit Testing Tools

Jasmine testing
framework

Karma test
runner

Unit Testing Flow
